

Dear Amazon Team,

Good day to you! Thanks for your concern about our account.

On August xx, 2022, we received a warning about a variant violation (Parent ASIN: BxxxxxxZ, Removed ASIN: BxxxxxxQ, B0xxxxxxxxxC), after receiving this email, we immediately investigated the problem in the operation process, after we checked the Inventory Records and Notification Policy Warning Records, we found that our sales teams have added some children products that are not actual variations of the parent product.

We are sorry for that we have misused ASIN variations or impacted customer trust through the usage of incorrect variations. We have realized our mistakes and we will not do the prohibited practices on Amazon any more. We learned the ASIN Creation Policy and Variation Policy detailed and then deleted these incorrect variations.

The following are the detail and POA that we made to resolve the problem and prevent misuse ASIN variations similar violation in the future, please kindly check it, we promise that we did not let this issue happen again in the future.

——**The root cause of the issue.**

Our company employees lacked experiences and did not familiar with Amazon Variation Relationships Policy. We did not pay enough attention in staff training for creating variations. We were eager to add more product comments and increase sales for new listings, and then did totally wrong things. The product we were selling was a xxx(产品名), and the rating for this product was not good enough, so our sales team created variants to improve the rating.

We should understand the product review policy more clearly: It is forbidden that if we create a variation relationship between products that are not actually related to each other in order to boost a product's star rating. We did not take the time to fully understand the Variation Policy, Detail Page Creation Policies, product review policy, and the Amazon Terms of Service agreement.

Variations are sets of products that are related to one another. Good variation relationship listings allow buyers to compare and choose products based on different attributes such as size, color, or other characteristics from the available options on a single product detail page.

Parent ASIN: BxxxxxxxxxZ, Removed ASIN: BxxxxxxxxxQ, BxxxxxxxxxC

Parent ASIN	Child ASIN	Variation Theme	Size Name
BxxxxxxxxZ	BxxxxxxxxQ	Size	9 Inch
	BxxxxxxxxC		5 Inch
	Bxxxxxxxx3		7 Inch

After we carefully check the details of the variations. We did the prohibited practices on Amazon as below:

1.-- Create variations with a theme that is not recommended by the category. When we first created a variation, we couldn't create it based on size. The suggested variation theme for this category of xxx(类目名) is color. But we found that many other sellers in this category have variations on the theme of size. So we consulted with seller support and learned that it is possible to bind variation by uploading a template.

Shortly after uploading the template, we received a warning about the offending binding variation.

2. -- Changing the product's detail page (parent or child) to become fundamentally different from the original product listed. The ASIN BxxxxxxxXC is actually a 7 Inch xxx, but in order to Create variation, our sales staff changed the size of the detail page of this ASIN to 5 Inch.

3. -- Adding duplicate child variations that are not substantially different than other variations within the family (The ASIN BxxxxxxC, and B0xxxxxxx3 is the duplicate listings for 7 Inch xxx, but we changed the size name 5 Inch for the ASIN BxxxxxxC in order to create the Variation for higher rating.)

4. -- Adding products that are fundamentally different from the parent ASIN. The Inconsistent Child ASIN BxxxxxxxQ is 2020 Version, The Inconsistent Child ASIN BxxxxxxxXC is 2018 Version, but the parent ASIN is 2022 Version. The two removed child ASIN don't actually match the parent ASIN. If we used the Size Name as the variation theme, the only difference for each child product should be to only different in Size. should not use Size Name theme to create the inconsistent child variations.

We promise we won't do things like that again. We made a plan, which is not only to solve the issues, but also to prevent the similar problem from happening again in the futur.

----The actions that we have taken to resolve the issue.

1. When we receiving Amazon notification, we immediately thoroughly check our account listings, we have already deleted all the incorrect parent-child relationships, and we promise that we won't release the listings in such stupid way. You can check our entire inventory accordingly.

2. We have reviewed our other listings in our Inventory to make sure that they follow Amazon policies. We have already checked all the listings and corrected the related listings that misuse ASIN variations. We pretty ensure that every product has accurate product name and description to avoid customer confusion. We will strictly abide by Amazon's rules and sell high quality products in a reasonable manner.

3. We have organized all our company's staff to learn about the Amazon policy in regards to ASIN Creation Policy and Variation Relationships Policy today. We researched all of Amazon's policies and rules. For policies regarding variation relationship we found the policy details are as follow:

[Variation policy]:

The following prohibited practices are misuses of variations, either of the parent ASIN or in parent-child relationships. These practices create a negative customer experience and can result in your ASIN creation or selling privileges being temporarily or permanently removed:

- Changing the product's detail page (parent or child) to become fundamentally different from the original product listed
- Changing the parent product's detail page so it does not match the children
- Adding incorrect child variations that are not true variations of the parent product. This includes but is not limited to:
 - Adding products that are fundamentally different from the parent ASIN
 - Adding products images and/or names that are that are fundamentally different from the parent ASIN
 - Adding products that are newer versions or models of the parent ASIN
- Adding multi-pack variations that aren't manufacturer-created to an already existing parent

[Product reviews and feedback]:

It is forbidden that if we create a variation relationship between products that are not actually related to each other in order to boost a product's star rating.

[Variation theme]:

The variation theme defines how related products differ from each other. Depending on the category chosen to list our products, variation themes also vary. We should choose the correct theme and use the valid values to show the attributes for all the variations families.

We should follow above instructions to check whether we could create parent and child variations for the products we want to list on Amazon. We may only create accurate variation relationships between products are fundamentally related to one another. Newer versions or models of the same product are invalid.

---The steps that you have taken to prevent the issue going forward.

1. We will strengthen the company's training for all employees. Our management staff should first enrich our knowledge, better understand Amazon's rules, and provide more comprehensive training for employees. In the future, we will participate in the fee-based Amazon official training courses, watch Amazon official

operation guidance live courses, and learn relevant policies from the seller's University and the seller's help page. We will hold training and learning lessons every week and also hold an examination for our staff on Amazon policy every month, especially ASIN Creation Policy, and all other Amazon policies, includes, but not limited to : Catalog, Catalog variation guideline; avoid duplicate ASIN; parent-child relationships and so on, to fully understand the Variation policy. Aimed at knowing all prohibited practices on Amazon so that we can strictly obey these policies to make sure no any violation in the future. This activity will last half a year until our staff are full understanding.

--The specific process of training:

We will choose some topics for how to create variations correctly, we have arranged experienced managers to prepare PPT courseware, and all our colleagues should participate in learning about Amazon policies.

1) . When to start training: We have started the training this month, we will have the training for once a month.

2) . Who will guide this training: We have invited performance managers from other companies with 6 years of experience in Amazon's global business to organize training for all our sales team members.

3). How to ensure that all members of the sales team understand Amazon's policies: At the end of each training, we will ask our sales team members to choose a parent ASIN on Amazon to analyze whether the variations are qualified or not.

4). After six months it is expected that all of our employees will fully understand the Amazon variant policy as well as the review policy, and if we will also hire new employees, we will train them again on the Amazon policy after they are onboarded.

2. We will strictly obey Amazon ' s policy to create variations. When we create variations for some listings, they must be the true parent-child relationship products. Meanwhile, we request all staffs to comply with Amazon policies completely.

3. Before upload a listing on Amazon, we will have to make sure the Parent/Child relationship, full check if this catalog support variation or not, if it doesn' t support variation, we will upload these listings one by one instead of adding children products that are not true variations of the parent product. We will only use the correct variations theme when creating parent and child relationships. As we are a manufacturer focused on xxx(自己的产品名), we have analyzed in detail the requirements for variations of this category and plan to develop products in different colors, and then creating the right variant instead of creating the wrong variant this way, and also provides more choices for customers.

4. We will use the following key points to monitor the behavior of our staff . Next time, when we plan to create variation, We will strictly follow the following standards of self inspection, and request, and require each employee and superior to sign on the form and bear the responsibility for violation of laws and regulations. If one of them broke the regulation as follows, he will be fired. We want every employee knows that we have zero tolerance about violating.

The key points are as below:

Is the catalog right?

Is the child really match with the parent?

Is the variation theme right?

Are the products fundamentally the same (i.e. the similarities of the ASIN's design and function are so basic as to be hard to alter resolve, or overcome)?

Could the products share the same title?

Do the products vary only in a few, specific ways that do not alter the core essence and nature of the item (such as color or size)?

Would customers expect to find these products together on a single product detail page?

5. We will strictly double check and inspect all listings every week. We have set up a special inspection team by two experienced employees who are responsible for checking whether the listings are in violation of Amazon policy. All listings have to be reviewed by them before releasing. If the listings are in violation of Amazon's policy, they will be deleted immediately. We guarantee that the similar problem won't happen again. We believe that we can do it better with a professional, skilled, and expanded team.

6. If we have any questions about Variation Creation, we will also contact seller support for help. We will apply for Amazon Global Selling Public offline Training Courses to let our staffs know more about the details of the Amazon seller policy. We will invest more on PPC sponsored advertisement to increase our sales instead of creating invalid variation. We must increase our sales on the basis of obey Amazon's policy.

7. When we create new listings and sell all of our products, we won't try to merge the reviews from other ASINs. We will not manipulation product review through abusing variations from now on. We'll create a list with detailed blue points and descriptions, as well as a competitive image.

8. We will provide more competitive product price and better shipping service with FBA. Provide our customers with the best quality products and customer support. Create more and more Light Deal and Best Deal to increase our sales. We will get review via correct method that Amazon's policy allowed such as Early Reviewer Program. We deeply realize that what we should do is to try our best to provide our valued customers with the premium products and satisfactory after-sale service, rather than manipulate customer reviews through create incorrect variation relationships.

We promise that we will follow Amazon's policy in the future, meets Amazon's every metric and selling policy. We sincerely hope that Amazon can give us a chance to correct, we are aware of our mistakes, and we are willing to show you the determination to correct them. Thanks so much. Look forward to your reply.

Best regards,

Xxxx
